## Functions of the levelling rake DynaRAKE

After TurfRenov®, ROTADAIRON introduces a new tool to optimize turf

restoration operations in «ZERO PHYTO» mode.

Use the DynaRAKE to rake the surface of turf and its collar to a reduced thickness.

Use the DynaRAKE to clear away debris and shape your soil before the ROTADAIRON soil preparation machine passes over it.

Extend your applications to resurfacing paved roads!

To make your work easier, the DynaRAKE is also available in a Swing version that allows the machine to be swivelled.

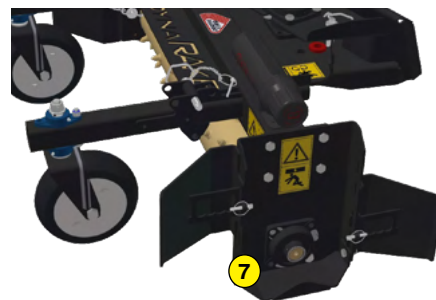

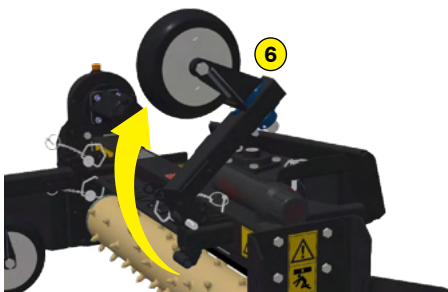

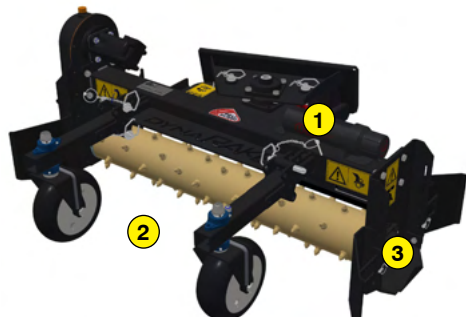

## Quality of service

A large stock of spare parts is permanently maintained at our factory. Our partners have online tools and quick access to manufacturer information.

Maintain the quality and performance of your Rotadairon® by using only original parts.
